

netflex

*A commercial floor covering that is resistant to heavy human traffic and produced from 100% original raw materials.*

- NetFlex is a commercial heterogeneous PVC flooring designed to withstand heavy foot traffic.
- With its T-class, Type 1 multilayer structure, it belongs to the most durable category of PVC flooring.
- Its high physical durability makes it resistant to impacts and wearing.
- It has better seal resistance and residual indentation.
- Its top layer is reinforced with PURGuard coating, ensuring easy maintenance and extended longevity.
- Its fiberglass-reinforced structure provides better dimensional stability and long-term durability.
- A wide range of colors and patterns is available to suit diverse aesthetic preferences.
- NetFlex is suitable for use in hospitals, schools, post offices, cafeterias, and other public interiors.
- Optionally it can be produced with an R10 slip resistance rating, offering safe usage in various environments.
- NetFlex products can be used with SafeFlex and DigiKap products for higher functional and aesthetics needs.
